

Star Empire Map Outline

Links are drawn between each star and its two closest neighbors.
BD-09*431, a star with human-habitable planets 150 light years from Sol was arbitrarily chosen as the Zork homeworld.
Neutral zone stars are within 30 light years of a point exactly between Sol and Zork.
Use this map to plot the expansion of each empire, colonized stars, battle fronts, and the location of other races.
